

# Asparagus packing

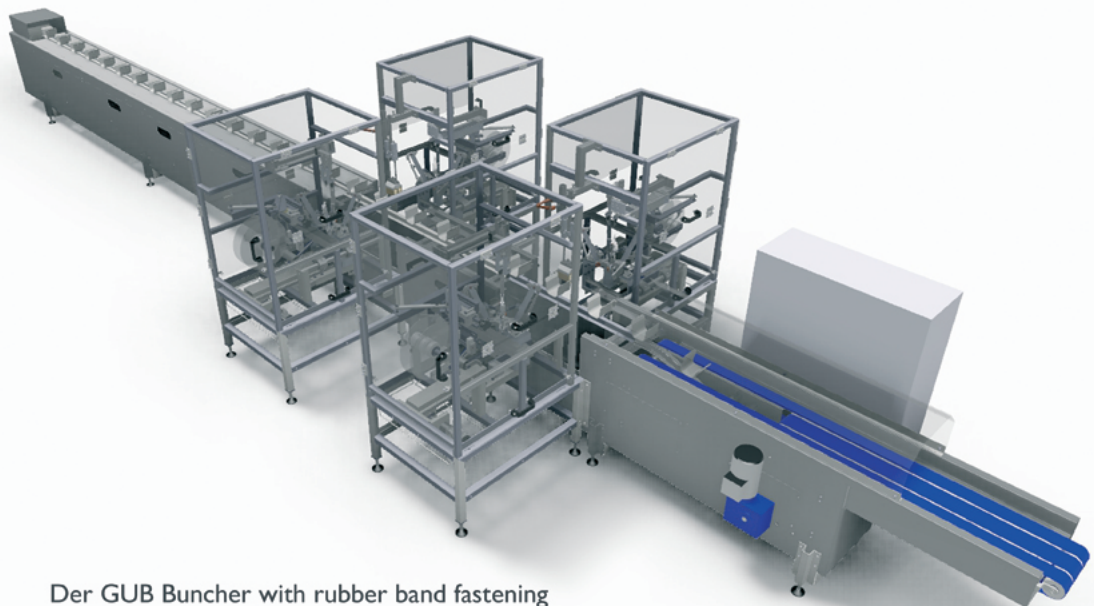

## Bunching and labelling of asparagus and other products!

The GUB Buncher can be used alone or in combination with our weighing and sorting machine.

The package units are placed directly in the cups on the feed belt of the GUB Buncher and transported into the buncher unit. On either side of the GUB Buncher there are special binding machines with clamp arms for attaching rubber bands. There is an option to have ElastiTag® on one side of the rubber band. Finally, the bunches can be taken away by the removal transport system and processed further.

- + **No damage to the product from rubber bands**
- + **Attractive product design with the printed label (ElastiTag®)**
- + **The only device of its kind in the world**

# The only device of its kind in the world

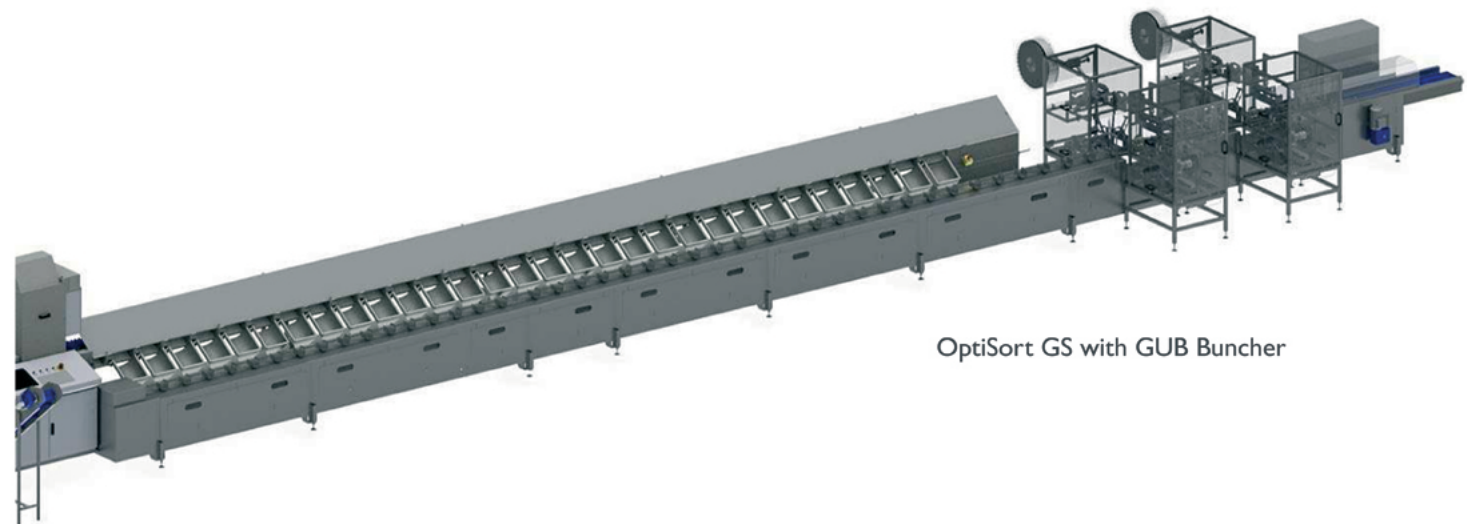

## Technical specifications of the GUB Buncher:

Binding materials: **ElastiTag®** from the spool and/or rubber band from the tube  
Performance GUB14 (2 bunching heads per side): ca. 45 units/min

The GUB Buncher has two special automatic bunching devices with clamp arms on each side, on one side they apply an **ElastiTag®** and on the other an elastic band. The clamp arms take up the **ElastiTag®** and the rubber band and spread them wide open, put them around the bunch and then gently let them close around the package unit.

Details

OptiSort GS with GUB Buncher

An additional printer can add your company logo and specific product information to the **ElastiTag®**.
